

process - field - data

error conditions

la: dpp num=1

field: x # y

(wrong number of hashes)
error message

dehash: empty list +

return not passed
list = to field
empty list - specific checks

OK - set dehash
error message

* note, some of
hashcount wrong in
other direction
ie. number la > number
field

la: dpp # er num=2

field: x #

dehash: error message
(missing hash)
+ empty list

return not passed
list = to field -
empty list - specific checks

OK - set dehash
error message

* note that reverse
is used with dehash

la:

field:

error message
from la checking

(1)

OK, set error
message

la: num=0

field: x

error message from la
checking

OK, set error
message
not passed
list

where field must be single
line

la: dpp num=1

field: x
y

single-line
test or return
returns
early -
error message
empty list

nothing passed to field -
specific checks
return list
